Cockroach Control

Before Treatment:

- 1) Cover fish and aquarium tanks with a sheet or blanket.

Before and After Treatment:

KEEP THE KITCHEN CLEAN!

- 1) Keep all food crumbs or bits of food swept up from the kitchen, dining and pantry floors.
- 2) Clean any spills in cupboards or pantry such as flour, cereals and other dry materials.
- 3) Keep all exposed food in sealed containers. Do not leave leftover food or beverages out in the open.
- 4) Put table scraps, vegetable parings and other waste material in tightly covered garbage cans or take out daily, don't leave out in the open.
- 5) Wash dishes before going to bed at night, not in the morning.
- 6) Rinse all pop, beer, and beverage containers when done. Do not keep more empty containers around than will fit in one grocery sack.
- 7) Clean grease areas on stove tops and in oven daily.

After Treatment:

- 1) For the first week after treatment, it is normal to see no results and sometimes more roaches after treatment than before. After a week you should see dead roaches and live ones but fewer than before treatment.
- 2) If you are still seeing roaches after 4 weeks, please contact us to schedule a follow up treatment.
